

Hello Leandro,

We enjoyed playing around with your app! Below are some screenshots:

The screenshot shows the user interface of the Merch AI Designer app. On the left, there's a sidebar with input fields: 'Describe your merchandise idea' containing 'Purple Octopus, Super Saiyan', 'Select merchandise type' set to 'T-Shirt', and a 'Generate Design' button. On the right, the main area has an 'Enter your OpenAI API Key:' field with placeholder text and a visibility toggle. The title 'Merch AI Designer: Revolutionizing Merchandise Creation' is centered above a preview image of a purple t-shirt with a vibrant, stylized illustration of a purple octopus with a Saiyan-like mane and a muscular build. A red 'Create' button is visible at the bottom right of the preview.

This screenshot shows the same app interface as the first one, but with different merchandise selected. The sidebar now shows 'Mug' as the selected item. The preview image on the right displays a white ceramic mug with a large, detailed illustration of the same purple octopus character from the t-shirt design, rendered here in a more monochromatic purple and blue color scheme. A red 'Create' button is visible at the bottom right of the preview.

Merch AI Designer: Revolutionizing Merchandise Creation

Your Custom Tote Bag

Red button with a white crown icon

DON'T STEAL DIS BAG!!

These are great! The only improvement would be spending more time on the prompt engineering to ensure each merch type gets an accurate design. For eg, you could say for the T-Shirt, **show the entire shirt, don't zoom in, provide 2 variations for a white black T-shirt (optionally show it being worn by someone)**

The option to include your own API key is great!!

```
        }
        data = {
            "model": "dall-e-3",
            "prompt": f"{description_input} as a {merch_type}",
            "size": "1024x1024",
            "quality": "standard",
            "n": 1
        }
```

Great job! You get your full project's value + 35 sand dollars!!
